Midwest Smart Glass FAQs

How long does it take the Smart Glass to switch?
 -Pretty fast – less than 1 second to be exact!

How do you clean Smart Glass?
 -Just like any other glass — with a soft cloth and window cleaner.

How much power does smart glass consume?
 -Smart Glass consumes 3 watts per sqm. For perspective: 10sqm of film consumes less energy than one LED bulb

What is Smart Glass?
 -Smart glass is the general name for glass or other transparent materials, that change opacity from transparent to translucent or opaque to block different types of light.

Does Smart Glass have to cover the entire glass?
 -No, the Smart Film can be completely customized. You can specify the desired dimensions and we will prepare it to your exact specifications.

What does Smart Glass cost?
 -Smart Glass costs depend on what type of glass is being used, location, quantity, and other factors. Contact us today for a free estimate!
